

Business Antivirus

Antivirus solutions are now a critical part of every IT environment.

Whether you're a small business requiring a properly configured firewall with anti-virus software on each machine, or a large enterprise requiring a more multi-layered approach, we have a solution for you.

Serval Worry-Free Business Security from Trend Antivirus Protection from the Cloud

Through our partnership with the entrust IT Group, we can now offer Managed Antivirus solutions from Trend Micro Worry-Free™ Business Security, a global leader in small business content security. It provides complete users protection for all of your staff. Unlike other vendors' offerings on the market, Worry-Free Business Security has been specifically designed for businesses with limited IT staff so is extremely easy-to-use and features integrated mobile device security.

As a Trend reseller, Serval IT Systems will take care of your IT security so that you can focus on your bottom line. Our business antivirus services will provide you with centralised visibility and control. Additionally, they are purpose-built to have minimal impact on your computer's performance and therefore provide you with fast, effective security that runs in the background. All the Serval AV solutions use the global threat intelligence provided by the Trend Smart Protection Network™ in order to stop threats before they reach your computer.

Whether you are using a Mac or Windows-based PC, Trend Micro Worry-Free™ Business Security protects your business by safeguarding email, web activity, file sharing and more. It can be deployed at your premises, or if you'd prefer, it can be hosted in the cloud and monitored by us.

As malicious threats are growing in volume, complexity and lethality, it has never been more important for organisations of all sizes to put an antivirus solution in place.
