Cloud Backup

Through our partnership with the entrust IT Group, we can now offer a cloud backup solution which is simple, cost-effective and will deliver in a crisis.

You already know that your business data is one of the most important assets of your company, an asset that you cannot afford to lose. If your company backs up data only where it is created, i.e. within your office premises, important information could be lost if a disaster strikes. The most effective method to protect your data is to back up to an offsite location, however, for small to medium organisations, creating a sensible backup solution can be complex and expensive, plus, it needs constant testing to ensure it will deliver in a crisis.

For most organisations an cloud backup service will meet all your requirements, at a sensible cost.

What is Cloud Backup?
Cloud backup means to back up your data from your workstation to one of our datacentres using your internet connection. Our cloud backup service leverages cloud computing to create an off-site storage solution with almost no hardware requirements, suitable for organisations of any size. As the data remains safe should your office be at risk from disasters such as flooding, fires or employee theft, many businesses choose cloud backup to be part of their disaster recovery plan.
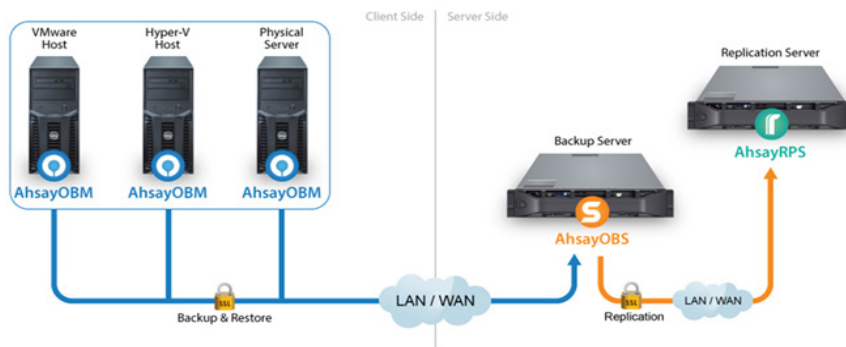

Benefits of the Serval Cloud Backup service :
* 24/7 Fully Managed Service
* 256-Bit Military-Level Encryption
* Anytime & Anywhere data restoration
* Highly Secure and Controlled Datacentres, ISO27001 certified
* Comprehensive Backup Features Provided by entrust Backup Software
* Backup Data with Replication for Added Protection
* 10GB Backup Storage for FREE

How does it work?
Using the Online Backup Manager (OBM) software, you can choose specific files or the entire contents of a hard drive to back up to our data centre. If you would prefer, you can choose to have your files automatically saved onto your online backup on a regular basis by scheduling backups at a specific time. Alternatively, when changes are made, your files can be backed up automatically.

We will provide you with a management console in which you can access the data and monitor the health of your backups. You can also download and use the data backup or browse the archived files directly on your computer. If necessary, you can restore an entire backup or just specific files using the same management console. All the backed up files are encrypted and stored in our data centres so you can have peace of mind your data won't get into the wrong hands.

Installation Cost:	£25 per workstation	£75 per server
	Unmanaged (per GB)	Managed (per GB)
Up to 10GB	£2.50	£3.00
11 to 20GB	£1.25	£1.25
21 to 40GB	£0.60	£0.85
41 to 50GB	£0.50	£0.75
51 to 75GB	£0.35	£0.50
76 to 100GB	£0.25	£0.35
101 to 500GB	£0.15	£0.25
501GB +	£0.10	£0.15
