

Hosted SharePoint

Through our partnership with the entrustIT Group, we can now offer you Hosted SharePoint.

Hosted SharePoint is a service that brings together your processes, information and people. It is designed to enable collaboration for teams and projects within organisations of any size and when properly configured can become your primary storage solution.

Using Hosted SharePoint allows you to upload office documents, manage versions and approve work online; share, discuss and brainstorm ideas; and create, schedule, assign and track plans, tasks and deadlines.

There are also many plug-ins that can extend basic functionality further. When properly configured it can become your primary storage solution.

The Serval Hosted Sharepoint service can be integrated to our Hosted Desktop environment, making it possible to build a secure intra/extranet facility where your internal staff publish documents for access by people outside your organisation.

Here are just some of the potential applications for Hosted Sharepoint within your organisation:

As a document library	Create a central place for business departments to store information. Make it easy for sales staff to download brochures, store proposals or process documents, make HR documentation available to all.
For document control	Decide who can view or edit on a document by document basis. Track changes, book documents in and out.
To build intranets	Create an internal collaboration space for shared information, calendars, news and other information.
To enable remote working	Provide a secure cloud storage solution so colleagues can work wherever they are. Allow external users to share documents with your organisation.
Microsoft Office integration	Use Microsoft Office 2010 (or higher) to edit documents on your desktop, laptop or Windows tablet but have them automatically saved back to the cloud

	Standard	Professional	Enterprise

Sharefile Enterprise

Nowadays, consumer-grade file-sharing services aren't enough. Security must be built-in, and built-in for business.

Sharefile is a market-leading solution for putting business data in the hands of your team members while you control its security and location. It can be accessed from your branded web portal, to mobile apps, as well as servers and hosted desktop solutions. However, your data will remain in our UK data centres, meaning that those devices can be wiped, locked or revoked at any time.
